

# Mobile Express

## Load Management in the Palm of Your Hand

To compete successfully, modern carriers and brokers need flexibility throughout their businesses. Unfortunately, too many of these companies are still tied to a computer to run their operations. PCS Mobile Express answers these challenges with a streamlined application that allows you to manage your freight, maintain compliance, and make better-informed decisions on the go and with ease.

Adding to the already expansive features of Mobile Express, PCS has now added complete load management capabilities - allowing dispatchers to create loads for Full Truckload and LTL Carriers and Brokers from within their mobile app. Dispatchers no longer need to be tethered to a desk or haul around bulky or expensive equipment. They can now create the load, rate the load, and transmit dispatch directly to the driver all from their smart device. Mobile Express simplifies load management and makes the entire process more accessible, saving you time and money.

Get more done with PCS Mobile Express.

### Complete Dispatch Management

Mobile Express allows you to manage freight operations no matter where you are. From Drivers to Dispatch, Mobile Express streamlines on-the-go operations from one app, enabling you to:

**Create TL/LTL Loads From Anywhere**
